How to clean a shower channel?

A question often asked by customers and users and an important criterion in product selection.

A question often asked by customers and users and an important criterion in product selection.

HL shower channel drains are designed for hygienic reasons so that odor barrier inserts can be removed and cleaned. In addition, this offers the advantage that in the event of a blockage in the drain pipe below, free access to the drain pipe is possible, e.g. to remove the blockage with a cleaning spring.

To make cleaning the odor barrier insert even easier, the shower channels of the HL53 series are now equipped with new odor barrier inserts. These can now be completely disassembled into all individual parts and cleaned in one easy step.

Price: remains the same

Delivery from: August 2023
